### **DETAILED ACTION**

This application is a continuation in part of 09/993,003.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20 drawn to a method for the prevention, reduction, or treatment of radiation injury comprising specific components herein, classified in class 514, subclass 168 for example.
- II. Claims 21-37 drawn to an oral composition comprising specific components herein, classified in class 514, subclass 168 for example.

Inventions Group I; and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, for example, interleukin-1- $\alpha$  derivatives can be used in a method for the prevention, reduction, or treatment of radiation injury.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

***Election of Species***

This application contains claims directed to the following patentably distinct species of the claimed invention: for example, polymers containing one or more hydrophobic groups, alkaline neutralizing agents, and cyclodextrins.

Applicant is required under 35 U.S.C. 121 to elect a composition comprising a specified combination of individual compound in elected group (see above) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Claims 1-37 are generic to a plurality of disclosed patentably distinct species. The claims read on the employment of various compounds e.g., in claim 8, with great diversity of chemical structure, the search for all of which presents an undue burden on the Office. It is noted that a reference to one combination of individual agents would not be a reference to another combination of individual agents under 35 U.S.C.103.

A "specie" is a specific compound, with all parameters and/or substituent variables FULLY accounted for.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

Art Unit: 1617

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because the above restriction/election requirement is complex, a telephone call to applicant's agent to request an oral election was not made. See M.P.E.P Sec. 812.01.
